

LABEL AND METHOD OF PRODUCING THE SAME**ABSTRACT OF THE DISCLOSURE**

Disclosed are a label and a method of manufacturing labels that are capable of preventing the hand from being heated when the label is used for such as a hot drink, while making a bottle body with the label applied thereto hard to slip off from the hand when the bottle body is picked up, as well as providing a design having a perspective and three dimensional effect. A label of the present invention is made of foam sheet having a foam layer, in which an outer side of the label has linear depressions formed by pressing the foam sheet so as to have partially thinned portions and hence provide an uneven surface portion.
